Innovative Go Developer with over 2 years of experience. I help startups and medium-sized companies develop an effective interface and grow

Experience

Hello! In August 2021 I read an article about HTML/CSS, after that I began to dive into the world of programming. By September, I decided to study back-end development and choose a new and rapidly developing Golang. I studied Go until March 2022. From March 2022 to December 2022 I was engaged in freelancing and website developing with my brother. From mid December to the end of July 2023, I immersed myself in Go theory and Databases.

Go Developer, Freelance

September 2022 – May 2023

Remote work

Something about me:

- | Learning English from 6 year old
